ÁDÁM ZOLTÁN SISÁK

Full-Stack Web Developer & DevOps

Contact Info

- **Email:** adam.dzsak@gmail.com
- **Phone:** +36 30 925 6225
- **Location:** Szeged
- **LinkedIn:** linkedin.com/in/adam-sisak
- **Github:** github.com/dzsak

TECHNICAL SKILLS

- **Backend & API:** Node.js (TypeScript), Go (Golang), Express, REST (OpenAPI/Swagger), Kong Gateway, Bash scripting.
- **Frontend:** React (Redux), Tailwind CSS, Angular (RxJS).
- **QA & Methodology:** BDD (Gherkin, Cucumber), E2E & Regression Testing, Agile (Scrum/Kanban).
- **DevOps & Infrastructure:** Kubernetes, Docker, FluxCD (GitOps), Jenkins, GitHub Actions, Prometheus, Graylog.
- **Databases:** MongoDB (Modeling & Optimization), PostgreSQL, SQLite.

PROFESSIONAL EXPERIENCE

FintechX Technologies | Szeged - *Full-stack Software & DevOps* | *June 2024 – April 2026*

- **PSD2 Financial Engine Development:** Designed and developed Node.js-based microservices within the Aggreg8 ecosystem. Integrated AISP/PISP services, enabling real-time aggregation and synchronization of bank account data (balances, transaction history) for retail and corporate clients.
- **Real-time Dashboard Development:** Implemented responsive financial interfaces using Angular and RxJS. Integrated Socket.io for instant, asynchronous display of banking data.
- **Infrastructure as Code (IaC) & DevOps:** Actively managed DevOps repositories. Developed and fine-tuned infrastructure and application configurations (Bash scripts, CI/CD pipelines) to ensure stable release cycles.

- **L3 Support & Monitoring:** Conducted system diagnostics and incident management using Graylog and Prometheus. Collaborated with Customer Support to resolve critical issues.
- **Data Modeling & Persistence:** Optimized high-traffic transactional databases in MongoDB, ensuring scalable query performance and financial data consistency.
- **BDD-based Test Automation:** Developed a comprehensive E2E testing framework using Gherkin and Cucumber. Validated complex banking workflows and UI consistency within Jenkins pipelines.

Gimlet.io | Szeged - *Full-Stack Developer* | *January 2022 – June 2024*

- **Kubernetes-Native Backend & CLI:** Designed and implemented Go-based microservices and Command Line Interface (CLI) tools. Monitored cluster states and FluxCD resources to enhance Developer Experience (DX).
- **Real-time Monitoring & Streaming:** Managed high-performance data streams using Go channels. Streamed kubectl outputs and pod logs with low latency from the backend to client-side dashboards.
- **Data-Driven User Interfaces:** Built modern, responsive dashboards and UI components using React, Redux, and Tailwind CSS to visualize complex GitOps processes and cluster data.
- **CI/CD Automation & Integration:** Established direct integrations with Kubernetes and FluxCD to support reliable and scalable application deployment workflows.
- **System-level Debugging & Code Quality:** Performed deep debugging on distributed cloud infrastructures and conducted daily open-source code reviews within a collaborative team environment.
- **Release Automation:** Fully automated software release processes using GitHub Actions, ensuring stable, cross-platform distribution and versioning of Go-based tools.

EDUCATION

Full-Stack Software Developer – Flow Academy, Szeged *2021*

- **Intensive Professional Training:** 800-hour, practice-oriented program focusing on modern software development foundations (Java backend and ES6+ JavaScript frontend).
- **Marketplace Project:** End-to-end development of a mobile-optimized marketplace application from design to functional implementation.
- **Agile Methodology:** Developed in 4-week sprints, mastering iterative development and client feedback management.
