Kristof Kelemen (Hungarian Citizen)

a9dhov@gmail.com

Summary

Fullstack engineer focused on shipping MVPs quickly and iterating under real user feedback. Experience across fintech systems and large-scale data pipelines, with a strong emphasis on ownership, performance, and rapid delivery in ambiguous environments.

Skills

Languages: React (5 years), Javascript (8 years), Typescript (5 years), Node (3 years), Angular (1+ years), Vue (1 year), React Native (2 years), SQL (4 years)
Tools: Redux, Recoil, React-Query, GraphQL, Git, Tailwind, Chakra UI, Material UI, PostgreSQL, Docker, CI/CD, Twilio, TypeORM, Jest, Playwright, Cypress, Sequelize, DigitalOcean, AWS SES, Redis, Expo, pm2

Experience

Frontend Engineer, Pulselive 07/2025 – 04/2026

- Made new features and promotions for an existing monolythic legacy system
- Refactored old code to modern, standard React and Typescript
- Helped delivering an MVP written in React Native for another project of theirs
- Had ownership over my code, everything written in sync with backend developers, UI/UX designers and stakeholders
- **Technologies used**: React, React Native, Typescript, Freemarker

Big Data Engineer, Telekom Hungary 03/2025 – 07/2025

- Created a building piece of a large smart failure prevention system using python, Apache Kafka, Pyspark, and mongo.
- The repository handled real time processing of 800.000 telemetry datas in 15 minutes, coming from 6 different Kafka streams in real time, all in stateful microbatch processing, backed up in mongo db, and regular clearing of data, writing to another Kafka stream for further processing
- **Technologies used**: Python, Apache Kafka, Pyspark, PostgreSQL, MongoDb, CI/CD, Kubernetes K8

Frontend Engineer, Medicover 09/2024 – 03/2025

- Delivered a functional MVP for a CRM system using React
- Modernized the codebase by introducing cutting-edge technologies like Vite, Tanstack Query, etc, improving build speed by 54%.
- Collaborated closely with backend engineers to design efficient endpoints and interfaces, ensuring seamless integration across the system.
- Boosted application performance and maintainability by eliminating inefficiencies through proper caching
- Mentored a junior developer and raising the team's overall code quality.
- Enhanced UI/UX by implementing user-centric QoL improvements
- **Technologies used**: React, Vite, Laravel, Docker

Fullstack Engineer, GiveFront Inc – Remote (Delaware, US) 01/2024 – 04/2024

- Delivered an MVP of a financial management system in three months, enabling early user testing and securing stakeholder approval for further development
- Engineered efficient PostgreSQL database schemas, enabling seamless integration of new features and reducing query execution times by 10%
- Enhanced system security by implementing endpoint protection, reducing vulnerability risks by leveraging best practices in Node.
- Enhanced application performance by fine-tuning key features using React-Query and Recoil, reducing user-reported lags
- **Technologies used**: React, Next.js, Node.js, PostgreSQL, Docker, CI/CD

Fullstack Engineer, Frontside LLC – Remote 06/2023 – 12/2023

- Modernized a legacy backend codebase to latest node
- Deployed new Ubuntu droplets, improved system reliability and reduced server downtime.
- Optimized and maintained CI/CD pipelines
- Designed and implemented database schemas

- Optimized database queries, reducing response times by 40%
- Developed an MVP of an interactive educational game using React and React Native, achieving high user engagement in beta testing with a 88% satisfaction rate among testers
- **Technologies used**: Node.js, CircleCI, Docker, PostgreSQL, React, Next.js, React Native, Java Spring Boot, Vue, Angular

Frontend Engineer, ITware (Outsourced to Vodafone Germany) – Remote 11/2021 – 06/2023

- Contributed to migrating a legacy codebase to micro frontend architecture
- Achieved 100% unit and end-to-end test coverage.
- Mentored five junior developers through pair programming, ensuring project milestones were met on time
- **Technologies used**: Angular, Vue, Javascript, Typescript, Jest, Cypress, Jenkins

Fullstack Engineer, Biroda LLC – Remote 02/2021 – 10/2021

- Delivered a highly functional upsell system MVP for a major telecom client, resulting in a 13% increase in upsell revenue during pilot testing
- Built a Tinder-like mobile app MVP using React Native, leading to a successful pilot launch
- **Technologies used**: React, Next.js, Typescript, React Native, Node.js

Frontend Engineer, C3S LLC – Budapest, HU 2019 – 2021

- Improved system performance by 30% through caching strategies and refactoring suboptimal components using React
- Published a private npm package to visualize satellite orbits and ground stations
- Designed and created views of a dashboard for satellite communication
- Split a monolithic codebase to micro frontend architecture
- **Technologies used**: React, GatsbyJs, Javascript, Typescript, pm2, Docker

Junior Frontend Engineer, Mindtech – Budapest, HU 2018 – 2019

- Getting to know React, React Native, Javascript and Node in general through several projects, including a web app I built alone to MVP for a client of theirs
- **Tecnhologies used**: React, React Native, Node.js, Javascript

Education

Eötvös Loránd University – BS in Computer Science 2021
