PROFILE

I'm a highly accomplished senior full stack developer with almost a decade of commercial experience. I have a BSc in financial engineering, however I never worked a day in finance and transitioned into software engineering. As a contractor, I have contributed to 30+ web applications to date, either as a frontend, backend or full stack developer. Equal experience with startups and enterprises. I have lots of cloud (AWS and GCP) and Linux infrastructure experience and am an AI-native developer - I use Cursor every day. The best tech stack for a web app is Next.js/Nest.js/Prisma/Hetzner (prove me wrong).

PROFESSIONAL EXPERIENCE

IBM **Fully remote**

Lead Backend AWS/Python Developer February 2025 — April 2025

- Supported the production release for the NHS Notify integration within the national cervical screening platform
- Implemented bug fixes and new features with Pytest, utilising AWS Batch, large-scale DynamoDB tables, Athena and SQS as well as a complex Redis queue with Celery
- Managed expectations with stakeholders from NHS, wrote and maintained documentation on Confluence
- Maintained CI/CD pipelines built with Terraform and GitHub Runner

Canary Wharfian **Fully remote**

Founder/CTO January 2024 — July 2024

- Built a full stack B2C AI web application single-handedly with Next.js/Nest.js deployed on Vercel and AWS EC2 with RDS achieving 5,000 unique visitors a month and $35,000 annual recurring revenue
- Designed backend, database schema as well as UI and UX by myself and iterated product based on user feedback
- Integrated a XenForo community management platform
- Utilised OpenAI and AWS Bedrock APIs to implement AI-based features into site and built large-scale scrapers with Selenium and Python (over 20 enterprise company job boards) with a Redis queue

Arm **Fully remote**

Senior Frontend React developer - Contract September 2022 — June 2023

- Rebuilt a legacy CRA application into a modern, responsive and pixel-perfect web application for user-based licensing portal from Miro and Figma designs
- Advised UI/UX designer on many issues pertaining to different screens and workflows, as well as workarounds due to limitations of internal React library
- Collaborated with product owner on priorities and ways of working to meet ambitious deadlines
- Designed and implemented React components utilizing company's own Storybook library, hooks, and leveraged Material UI theming and Material UI X Data Grid as UI frameworks
- Championed the integration of a backend GraphQL API with TanStack's react-query
- Troubleshooting various CI/CD issues on Azure DevOps to achieve a robust, reliable deployment process for the frontend application

HSBC **Fully remote**

Senior Full Stack Developer - Contract September 2021 — April 2022

- Implemented an internal compliance web application with React and Express.js, supporting workflows with Jira and powered by SQL Server and Microsoft Active Directory
- Set and managed expectations for four different stakeholders in the business, holding weekly progress demos presenting state of the delivery and iterating software requirements in an agile manner and providing tips for UX improvements
- Implemented JWT authentication with LDAP and Azure AD integrated
- Managed custom production Linux server for secure deployments
- Used TailwindCSS for rapid frontend development and ag-grid enterprise for displaying a vast amount of tabular data

Flier Mapper **Fully remote**
Senior Backend Developer - Contract October 2021 — December 2021
- Architected and implemented a microservices backend on GKE Autopilot to automate GPU-heavy image processing and a third-party Python SDK from Agisoft
- Implemented payment processing and subscription plans with the Stripe SDK using Node.js, Firebase database and functions
- Configured and deployed a number of different resources on GCP such as Cloud Storage, App Engine, Compute Engine and IAM
- Implemented custom CI/CD pipeline for both client and server applications using Cloud Build for Google Kubernetes Engine with spot instances (achieving a significant reduction of costs) and RBAC as well as App Engine
- Set up Elasticsearch ingestion pipeline and implemented complex search queries

Publicis Sapient **Fully remote**
Senior Full Stack Developer - Contract August 2021 — September 2021
- Developed bespoke generators for NX Console leveraging vite.js, esbuild, and webpack 5, facilitating rapid creation and scaffolding of DevOps templates and React components

Porsche **Fully remote**
Senior Full Stack Developer - Contract May 2021 — June 2021
- Designed and developed IndustrialCloud, a cloud-native platform for the auto manufacturing industry leveraging Node.js, Angular, and React on AWS, employing infrastructure-as-code tools such as Terraform, SAM, and CDK for scalable and efficient deployments.
- Utilized AWS services, including API Gateway, DynamoDB, Lambda, and CloudFormation templates, to construct a robust, serverless architecture, complemented by DNS configuration through Route53 and storage solutions via S3.
- Refactored existing legacy web applications and services, transforming them into a white-label SaaS solution, streamlining operations and broadening applicability across multiple automotive manufacturing facilities in Germany.

Emotif.ai **Fully remote**
Senior Full Stack Developer - Contract March 2021 — April 2021
- Built a comprehensive web dashboard application for an AI startup using React, TypeScript, and AWS Amplify, focusing on clean and efficient code with functional components, context API, hooks, and styled-components.
- Implemented Figma designs into pixel-perfect screens, ensuring a seamless and visually appealing user experience that meets design specifications.

Mastek **Fully remote**
Senior Backend Developer - Contract February 2021 — April 2021
- Developed user interface for six different reporting journeys of NHS Jobs 3 with unit, integration tests, i18n and Cypress and Jest in Node.js using Gov.uk components

Foundry4 **Fully remote**
Senior Full Stack Developer - Contract November 2020 — February 2021
- Implemented Node.js backend for Document Service with Express.js and multer in a microservices architecture
- Implemented several validation and unit test cases on appeals service with Cypress and Jest in a DevOps environment
- Followed agile scrum methodology and semantic release conventions within Planning Inspectorate UK government agency

We Are Savvy - Thirdway Interiors **Fully remote**
Senior Full Stack Developer - Contract September 2020 — November 2020
- Designed and implemented new features on property management platform and visitor management system with React and Flexbox, fixed existing bugs and maintained private npm package
- Converted designs on Zeplin to pixel-perfect code for all screen sizes
- Managed expectations with stakeholders and delivered features on short deadlines
- Used Next.js, MongoDB, Mongoose, GraphQL Apollo, React hooks, Chart.js, Express.js and TypeScript as the tech stack
- Implemented Node.js service for consuming and aggregating Density.io data
- Monitored application performance and managed deployments on Heroku

The React Guys **Fully remote**
Senior Full Stack Developer - Contract April 2020 — July 2020
- Implemented complex features, such as best deals and Maps integration, authentication and chat notifications and product pages with AWS Amplify, Material-UI, react-router-dom, Redux, AWS Cognito and AWS SNS
- Implemented complex, multi-filter search on homepage with Elasticsearch and integrated with react-infinite-scroll library as well as main homepage search with multiple filters
- Proposed agile scrum methodology as a better way to manage project and achieved full adoption

Carphone Warehouse **London, England**
Senior Frontend React Developer - Contract September 2019 — February 2020
- Implemented frontend features on new trade up feature on main web shop and product description and listing pages with React
- Fully remote collaboration with offshore development team based on Czech Republic

British Telecom **Ipswich, England**
Senior Backend AWS Developer - Contract June 2019 — September 2019
- Designed and implemented a RESTful web API service on AWS API Gateway with TypeScript, Node.js, utilizing AWS Lambda, AWS Route53, AWS DynamoDB, AWS IoT Core, AWS CloudWatch triggers and AWS SNS
- Introduced 90% cost saving of total AWS bill by publishing internet speed test results via WebSockets instead of a HTTP polling mechanism

- Drawn architectural diagrams, integrated data sources from legacy systems into Speedo, maintained OpenAPI specification and managed stakeholder expectations

Concentrix Tigerspike **London, England**
Senior Full Stack Developer - Contract February 2019 — March 2019

- Converted designs on Zeplin to pixel-perfect code for all screen sizes with React, react-router-dom, Material-UI framework and leaflet for the Smart Cities SSE platform
- Designed and implemented database schema and backend services via API Gateway in Node.js, using Elasticsearch to ingest data and create efficient queries with Kibana
- Integrated AWS S3, AWS IoT Core and AWS DynamoDB into product

MullenLowe Profero **London, England**
Full Stack Developer - Contract January 2019 — February 2019

- Implemented backend Node.js service with logging for statically generating application build for integration with legacy infrastructure platform
- Integrated solution with AWS S3 and AWS CloudFront
- Assisted with front-end web development tasks, such as fine tuning Sass stylesheets and Preact components, Google Workbox and Analytics integration

EDUCATION

Bayes Business School - City, University of London **London, England**
Bachelor of Science in Financial Engineering 2017

Goizueta Business School - Emory University **Atlanta, USA**
Bachelor of Business Administration 2015 – 2016
