Andrew Zsebe

Software architect | Security | TypeScript | JavaScript | Angular | PHP

+36 30 292 0150 • hu.zseand@gmail.com • https://www.linkedin.com/in/zseand/

IT SKILLS

Backend development: Node.js (8+ years), **PHP** (10+ years), **JavaScript** (10+ years) ,TypeScript, REST API, Microservice architecture/Docker (6+ years), API planning and integration

Databases: MariaDB, SQL optimalization, NoSQL, data model planning

Frontend: HTML5 (10+ years), SEO(10+ years), Angular, React

Cloud & DevOps: Docker, CI/CD, Git

Architecture & System Design: Software architecture design, scalable system design, Security by Design mindset, high-availability planning.

Operations & Stability:Linux expertise (10+ years), performance optimization, security-focused operations, incident diagnostics, infrastructure fundamentals (networking, telecommunications).

Project and Delivery Mindset:

Requirements analysis, end-to-end project delivery, client communication.

WORK EXPERIENCE

Freelancer
Software Developer 2022-

- I analyze client requirements from both business and technological perspectives, then deliver full lifecycle web and backend projects from requirements assessment through architecture design and development to deployment and long-term support.
- I develop **Node.js**- and **PHP**-based backend systems and **HTML5 / Angular / React** web applications, ensuring secure, scalable, and maintainable operation.
- I design and implement REST APIs and microservices, and optimize **MySQL** and **MariaDB** database structures.
- I integrate external services including authentication and payment systems, guaranteeing stable and secure data connections.
- I maintain continuous communication with clients, manage deadlines, and ensure quality expectations are met throughout the entire project lifecycle.

Asseco CE
Senior Developer 2018 – 2022

- I participated in **enterprise system design** from the very beginning.
- I developed the complete backend and frontend architecture of a medical software system from initial concept to production launch.
- I designed and implemented **Node.js-based microservices** and REST APIs, as well as backend logic for clinical workflows, supporting the digitalization of healthcare processes.
- I integrated external healthcare data sources, ensuring secure, auditable, and consistent data flow in a compliance environment.
- I created **Docker containers**, deployed and configured **Linux servers**, and implemented monitoring solutions to ensure stable operations.
- I implemented **security and regulatory** compliance requirements, supporting efficient team collaboration through structured **Git**-based version control.

Freelancer 2015 – 2018
Software Developer

- I developed the mobile version of a visitor access control and information system, integrating it with the central remote system and optimizing **Cordova plugin** operation.
- I developed a **native Android** application for long-range RFID hardware, implementing bidirectional, real-time communication with the remote system, establishing the foundation for an RFID-based identification system usable effectively in field environments.

OTHER

- Language skills: Professional English, both spoken and written.
- Hobbies / Interests: I am interested in engineering and natural sciences, and whenever I can, I enjoy doing sports and spending time with friends.

EDUCATION

Advanced vocational qualification (OKJ)

- **Internet Application Developer**
- **System Designer**
- **Project Manager**
