

ATHUKORALAGE CHAMITH UDAYANGA

SENIOR SOFTWARE DEVELOPER

SUMMARY

Senior Software Developer with 7+ years of experience designing and developing scalable backend services, microservices, and cloud-native systems. Strong experience in Go, Java/Spring Boot, Kotlin, React, PostgreSQL, Kafka, Docker, and Kubernetes. Skilled in system design, API development, performance optimization, observability, and production reliability across fintech, mobility, and enterprise platforms.

EDUCATION

Bachelor of the Science of Engineering (Electrical and Information Engineering)

Faculty of Engineering, University of Ruhuna

05/2013 - 11/2017 Hapugala, Wakwella Road, Galle, Sri Lanka

EXPERIENCE

Senior Software Engineer

Lexagle

05/2026 - 07/2026 Singapore | Remote from Sri Lanka

www.lexagle.com

- Developed backend and frontend features for enterprise agreement management systems using Kotlin, React, PostgreSQL, and cloud-native architecture.

Technical Lead

Creo360 Inc

02/2026 - 04/2026 Canada | Remote from Sri Lanka

www.creo360.com

- Led the architecture and development of a document management service integrating e-signing and identity verification systems with a large-scale car rental platform.
- Architected and delivered a centralized storage adapter, creating a reusable platform layer for document management across services.
- Improved code quality, debugging, testing, and delivery efficiency through structured code reviews, automated testing, and modern development practices.
- Mentored backend engineers through code reviews and system design discussions.

Consultant

Creo360 Inc

10/2025 - 01/2026 Canada | Remote from Sri Lanka

www.creo360.com

- Architected and developed a middleware service integrating the car rental platform with Toyota Financial Services via SAP S/4HANA APIs, handling financial business logic and transaction synchronization.
- Diagnosed and resolved critical production issues, improving platform reliability and system stability.

PROFILE

Address

Katugahawaththa, Dombagoda, Horana (12400), Sri Lanka.

Phone

+94 76 227 8118

Email

Udayangaac@gmail.com

Nationality

Sri Lankan

TECHNICAL COMPETENCIES

Programming Languages, Frameworks & APIs

Go (Gin, Fiber), Java 8, Kotlin, JavaScript (React), SQL, RESTful APIs

Databases

PostgreSQL, MongoDB, MySQL

Cloud & DevOps

Google Cloud Platform, Amazon Web Services, Docker, Kubernetes (GKE), CI/CD

Messaging & Integration

Apache Kafka, Event-Driven Architecture

Observability

Prometheus, Grafana

Architecture & System Design

Distributed Systems, Microservices Architecture, API Design, Design Patterns, SOLID Principles

Tools & Engineering Practices

Git, Test-Driven Development, Code Reviews, Technical Documentation, Agile / Scrum

Leadership & Collaboration

Technical Leadership, Mentoring, Architecture Reviews, Cross-Team Collaboration

EXPERIENCE

Associate Technical Lead

Creo 360 (Pvt) Ltd

📅 12/2021 - 09/2025 📍 Colombo, Sri Lanka

🌐 www.creo360.com

- Developed scalable microservices for payment processing and vehicle tracking systems, integrating damage monitoring, parking management, and fleet management platforms.
- Reduced API p95 latency by 30% by optimizing Go APIs, reducing CPU and memory usage, and implementing a reusable in-memory caching layer to enhance system performance and reliability for client-facing and third-party integrations.
- Designed and developed reusable Go libraries and command-line interface (CLI) tools invoked by the COBOL core system to enable HTTP integrations with external platforms, overcoming the lack of native TCP support in COBOL.
- Established engineering best practices through code reviews and mentoring, promoting Test-Driven Development (TDD), SOLID principles, design patterns, and Go concurrency patterns to ensure scalable and maintainable services.
- Owned backend service delivery from architecture to production, designing resilient systems with caching, rate limiting, and retries.

Senior Software Engineer

Digital Mobility Solutions Lanka PLC (PickMe)

📅 10/2020 - 01/2022 📍 Nugegoda, Sri Lanka

🌐 www.pickme.lk

- Designed high-throughput Stock Keeping Unit (SKU) and outlet search services using Elasticsearch and RocksDB.
- Optimized high-throughput Passenger/Merchant APIs through micro-optimizations to achieve more than 1,000 RPS with sub-20 ms latency.
- Drove engineering excellence by mentoring junior engineers, enforcing code quality standards, and guiding best practices in distributed systems and performance optimization.
- Contributed to architecture discussions to enhance the platform.
- Improved system observability using logs, metrics, and profiling, enabling faster root-cause analysis in distributed systems.
- Built a Kafka event lifecycle service for the delivery platform to improve the reliability of event processing across microservices.

Software Engineer

Digital Mobility Solutions Lanka PLC (PickMe)

📅 10/2018 - 09/2020 📍 Nugegoda, Sri Lanka

🌐 www.pickme.lk

- Designed and implemented a centralized in-memory cache for SKU and outlet management, reducing duplicated logic and improving API latency with Uber H3 and Open Source Routing Machine (OSRM).
- Designed and developed scalable backend APIs for merchant web and Android applications, using Kafka-based event streaming and Test-Driven Development (TDD) to support reliable, maintainable, and production-ready software delivery.
- Conducted load tests on monitoring APIs, established performance baselines, and identified bottlenecks.
- Refactored real-time tracking APIs (delivery and ride-hailing).
- Developed a real-time merchant heartbeat service to track availability signals, enabling dynamic operational decisions and improving marketplace responsiveness.
